

Project Resources & Coordination

Technology change can require short-term intensive use of specialized resources. Use a Pearrari Solutions project resource when you're migrating an online banking platform, changing bill pay providers, implementing a new product, doing a merger, or changing your core data processing vendor.

We have the right experience to come alongside your own team and fill in the gaps where you're resource-constrained or need specialty experience. We have PMP certified project managers, project managers with tremendous financial technology experience. Our Systems practice also includes highly skilled technical resources for those infrastructure or optical projects.

Pearrari Solutions will help you with whatever part of the process you need covered including any/all of the following according to your preferences:

- Align operating processes between systems
- Act as project driver
- Coordinate resources and act as the project manager
- Keep the project moving and on schedule
- Identify and manage risks
- Keep communication flowing
- Identify and manage blockages
- Facilitate decision-making
- Ensure branding is handled well
- Update and optimize back office procedures for the new system
- Ensure configuration options are known, considered, and delivered as requested
